

Human Number Line

Grades K–2 • 10 min • 6–20 students

WHAT YOU NEED

- Index cards numbered 0–20 (one per student, reusable — in the printable kit)

SETUP

Print and hand out one number card per student (repeat numbers if you have more students than 0–20).

HOW TO RUN IT

1. Give each student a number card and have them mix up their position in the room.
2. On "go," students must arrange themselves into a line from smallest to largest number without talking above a whisper.
3. Once lined up, walk the line together counting out loud to check the order.
4. Shuffle and redistribute cards for a second round, this time timing how fast the class can line up correctly.

VARIATIONS

- Use cards with simple addition problems ($3+2$, $5+1$) instead of plain numbers — kids solve their own card before finding their spot.
- Split into two smaller lines racing against each other for a bigger class.
